Here is a nice demo of this wonderfull arranger, below you can find the donwload link. Yamaha Keyboard Styles Yamaha Arranger History Keyboard. Press release., Tyros4 PSR-S910,PSR-S710 Tyros3 Sep, 2008 PSR-S550B PSR-S900, PSR-S700 PSR-S600 Tyros2 PSR-3000/1500 PSR-2100/1100 Tyros PSR-2000/1000 900 0 Pro PSR-550 Jan, 2001 PSR-9000 PSR-740/640/540 PSR-8000 PSR-730/630/530. click the date to view the press release. Click on the model to see Features and Specifications on the Yamaha USA website. Navigation The left navigation bar will take you to a style page on the indicated Yamaha arranger keyboard. The internal preset styles available for that keyboard are displayed. On many of the pages there are additional style sets that are compatible with, indeed, have been tuned to work with, that keyboard All these sets of styles can be downloaded. In all cases, you will download a compressed file (a zip file) that must be uncompressed to reach the included styles. Make sure that page and scroll to the end of the page. There are many thousands of styles available in this section. If Yamaha and/or arranger keyboards are new to you, you might be interested in learning a little bit about these keyboards and the styles they contain, as well as Yamaha's history for announcing new keyboards. New keyboards every year Anyone who has had an arranger keyboard for a few years knows how much this industry is changing over time. These keyboards are, in their heart, computers and like your typical office-top computer, available features seem to be better and better each year (although sometimes users are disappointed to see the disappearance of appreciated features). So I arranged the Yamaha styles section to reflect a small part of the historical recording of Yamaha arranger keyboards. The table shown above lists the different families of Yamaha Arranger keyboard models and the month and year of the press release for this model. In fact, the press release data provides a quick look at that press release. You can see a detailed list of features and specifications by clicking on any model number. Very often, there will be several press releases over several months, so these data are only approximate, but they do not give you an idea of when new models were introduced. Buyers are very aware that it is often several months after a model is introduced before they actually get to see it here in the states. And sometimes months after that, before being frequently available. The pages in this section focus on models that start with the PSR730 series introduced in 1997 and go as far as the current PSR-S970 model introduced in July 2015. Some models represented a number of keyboards, for example PSR740, PSR640, and PSR540. Keyboards within a family generally operated the same with more expensive models with more styles, more voices and usually more features. I mean the top-of-the-line model in a family keyboard, but many of the styles provided will also work on the younger brothers. We also mix a high-end series and a mid-range series. The high end is represented by PSR8000, PSR9000, 9000Pro, Tyros, Tyros2, Tyros3, Tyros4, and Tyros5 and Tyros5-76. The average range is PSR730, PSR740, PSR2000, PSR2100, PSR3000, PSR-S900, PSR-S910, PSR-S950, PSR-S970, and the new PSR-S975. According to the table, a new mid-range keyboard is introduced one year and a new high-end keyboard the following year in a two-year sequence. There is no guarantee that this model will continue, but chances are that new and better keyboards are now on the drawing board. PSR-S975/S775 were introduced in 2018 as substitutes for PSR-S970/S770. Tyros5 replaced the previous model of the flag ship Tyros4. Genos, however, has a significantly different from tyros5 similar previous keyboards each year, if you have paid attention to the evolution of car models, you will undoubtedly have noticed a major major change that occur in a year and then that basic body style being carried over several years before another major style change. You will find the same idea in these arranger keyboard models. The PSR730 and PSR740 model families worked in much the same way. The introduction of the PSR2000 was a completely new and different operational system. This system was carried over to Tyros, 2100, 3000, Tyros2, PSR-S900, Tyros3, PSR-S910, Tyros4, PSR-S950, Tyros5, PSR-S970, PSR-S970, and PSR-S975. It is also essentially the same operational system used in Yamaha CVP digital pianos. The similarity in the operating system means that it is quite easy to move from one model to another. It also means that many of the styles will be somewhat interchangeable. I say somewhat, because while the operating system may be similar, the hardware is not and the voices and speakers included with each new keyboard are generally different. Thus, a style from an older keyboard can, indeed, play on a newer one, but it may not sound exactly the same. Styles, however, can be tuned to optimize their sound on each of the keyboards. More on this below. Default and Adjusted Styles For each keyboard, the Styles page gives you the internal preset styles that come with that keyboard. In several cases, you'll also find additional, specially tuned style sets for that keyboard available on the Styles page. For example, you'll find Tyros styles tuned for PSR2000 on the PSR2000 Styles page. You'll also find PSR740 styles tuned to PSR2000 on that page. In both cases, the changes had to be made to the original styles to tune them to play on a PSR2000. Style Compatibility & MegaVoices Although a number of Yamaha keyboards have been produced, they all included a basic set of 480 XG and GM voices. This is why you can take a style that was available on the PSR8000 and play it in PSR740 or PSR2000 or Tyros5. This style compatibility, however, was broken with the introduction of the Tyros model. This model included the new MegaVoice technology. This technology has provided more realistic sounding instruments, especially guitars, for styles built in Tyros. But the technology was only available in Tiroi. These original styles will play, so it is, in earlier keyboards, but they won't sound good. Previous keyboards don't have megavoices technology. Fortunately, there is software available that can detect and remove megavoices from the style and replace it with a standard guitar or similar voice. When you see Tyros styles for PSR2000, that's what you had to show up. All styles had to be tuned, fixing up the accompaniment voices if necessary. In addition, the styles on the from PSR2000 further, included a single touch-embedded and stored settings with style. OTS uses preset on the keyboard. If newer keyboards do not have voices available on older keyboards, then these voices should also be adjusted to tune this style to be used on previous keyboards. This style tuning is one of the strengths of the PSR and Tyros line arranger from the PSR2000 MODEL. Not many users actually create their own styles from scratch, but many have learned to modify an existing preset style to tune in to their particular preferences. It is quite easy to modify accompaniment voices and volumes to suit your personal tastes. You can change the default tempo of a style and different OTS voices saved with this. You can even take parts of a style, for example, a bass model used in one style, and put it in another style that you are tuning. All of this can be saved in a new version of the style that you can name whatever you want. This way, each user can create as many styles as is needed with these keyboards. The lessons available in the section of this site help you learn to do all this tuning style. In this style section, as well as other sections, you'll be able to download styles created and/or tuned by other owners for your use and enjoyment. Joy.
